

## ABSTRACT OF THE DISCLOSURE

A clamping device is provided for a tool component, such as a saw blade. The clamping device includes a housing with a saw blade location channel defined therein for the location of at least a part of the saw blade in use. Clamping members are movably mounted in the housing and can be moved between a locked position, wherein the saw blade is clamped between one or more surfaces of said clamping members and one or more walls defining the saw blade location channel, and an unlocked position, wherein the saw blade can be inserted or removed from the clamping device.
